THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 3 line 1 and claim 5 line 1, "claim 2" should be --claim 1--;

Claim 36 line 2, "claim 21" should be --claim 17--.

The following is an examiner's statement of reasons for allowance: None of the prior art made of record teach - a shock absorbing steering apparatus with the engagement adjusting mechanism includes a mechanism operable to cause the holding portion to be displaced by an amount corresponding to a magnitude of an impact applied to the body of the vehicle upon the collision of the vehicle, and a mechanism operable to permit the engagement between the engaging portion and the holding portion when the amount of displacement of the holding portion is larger than a predetermined threshold (regarding claim 6); the impact energy absorbing member is arranged to be positioned relative to the mounting portion such that the engaging portion and the holding portion are spaced from each other by a predetermined free-running distance in said forward direction before the steering column is moved (regarding claim 8); comprising an initial-load adjusting mechanism operable to reduce a rate of increase of an impact energy absorbing load to be generated by the impact

Art Unit: 3611

energy absorbing member in an initial period of the absorption of the impact energy, being provided in at least one position selected from among: a position between the impact energy absorbing member and the steering column; a position on the impact energy absorbing member (regarding claim 10); the engaging portion of the impact energy absorbing member and the holding portion are engageable with each other so as to provisionally hold the steering column on the portion of the body of the vehicle through the impact energy absorbing member (regarding claim 11); the engaging portion and the holding portion are arranged such that the engaging portion receives a shearing load after the engaging portion is brought into engagement with the holding portion (regarding claim 13); the impact energy absorbing plate includes a generally U-shaped portion consisting of a curved section and two arm sections extending from respective opposite ends of the curved section, and the mounting portion is sandwiched by and between the two arm sections in a direction of thickness of the plate (regarding claims 15, 41, 42); a column holder structure which holds the column body and which is fixed to the portion of the body of the vehicle and is releasable and movable away from the portion of the body of the vehicle in the forward direction of the vehicle, in the event of secondary collision, and the column holder structure includes the mounting portion while the portion of the body of the vehicle is provided with the holding portion (regarding claim 17); the energy-absorbing-load changing mechanism increases the impact energy absorbing load with an increase in the velocity of movement of the steering column (regarding claim 38); the energy-absorbing-load changing mechanism changes the impact energy absorbing load such that the impact energy absorbing load

is larger when the velocity of movement of the steering column is higher than a predetermined threshold (regarding claim 39); energy-absorbing-load changing mechanism includes (a) a deformation-resistance increasing member provided on the mounting portion and engageable with the impact energy absorbing member so as to increase the force of resistance to the deformation of the impact energy absorbing member, and (b) an engaging mechanism operable to cause engagement of the deformation-resistance increasing member with the impact energy absorbing member when a velocity of movement of the impact energy absorbing member relative to the front end portion of the mounting portion is higher than a predetermined threshold (regarding claim 41); energy-absorbing-load changing mechanism includes (a) a movable member provided on the mounting portion and engageable with the impact energy absorbing member such that the movable member is movable when the impact energy absorbing member is displaced relative to the front end portion of the mounting portion, and (b) a movable-member-movement restricting mechanism operable to restrict a movement of the movable member when a velocity of movement of the movable member is higher than a predetermined threshold (regarding claim 42).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
